PROFILE

Cybersecurity engineer with hands-on depth in AI/LLM security adversarial attack-pattern research, judge-model evaluation pipelines, and training infrastructure mapped to the OWASP LLM Top 10, combined with experience inside a national security agency (INSA, Ethiopia) and a FINMA-regulated bank (BCV). Comfortable operating in high-discretion, compliance-heavy environments and translating deep technical security concepts for non-technical and cross-functional audiences, most recently as a keynote speaker at the Swiss Cyber AI Conference 2026 on LLM attack patterns and defense strategies.

CORE COMPETENCIES

AI/LLM Security: Adversarial prompt engineering, prompt injection, model evaluation, judge-model architectures
SIEM & Detection: Splunk, MITRE ATT&CK, detection-as-code, use-case engineering, log analysis
Incident Response: Triage, containment, forensics fundamentals, fraud investigation, RIO methodology
Endpoint & Network Security: HIPS, IDS/IPS concepts, firewall rules, network segmentation, Nginx hardening
Identity & Access: Multi-role RBAC design, privilege management, authentication flows, session security
Compliance & Frameworks: FINMA, GDPR, OWASP LLM Top 10, OWASP Top 10, NIST Cybersecurity Framework
Cloud & Infrastructure Security: Cloud infrastructure (EU-hosted), PostgreSQL, Docker, credential rotation, bot protection
Languages & Tools: Python, TypeScript, Bash, SQL, Git, Linux (5+ yrs), Wireshark fundamentals

PROFESSIONAL EXPERIENCE

Independent Technical Work & Career Transition Jan 2025 – Present
Lausanne, Switzerland

- Designed and shipped a production LLM AI security training platform mapped to the AI OWASP LLM Top 10 — 385 interactive attack/defense AI labs with automated adversarial grading.
- Architected a cascaded judge-model evaluation pipeline on cloud infrastructure with structured output enforcement, graceful degradation, and token-budget safeguards.
- Implemented a multi-role RBAC system, GDPR-compliant cookie consent, disposable email blocking, bot protection, and credential rotation hygiene.
- Keynote speaker, Swiss Cyber AI Conference 2026 (Lugano) – "Hacking LLM Applications: Attack Patterns, Defense Strategies, and Why AI Security Training Matters."
- Active partner and guest instructor, Powercoders ICT Bootcamp (Bern) — delivering LLM security and red-teaming sessions.

Technical Security Coordinator – *Banque Cantonale Vaudoise (BCV)* Aug 2024 – Dec 2024
Lausanne, Switzerland

- Operated within FINMA-regulated banking infrastructure - high-availability, strict compliance, zero-tolerance incident response.
- Enhanced HIPS methodology, improving endpoint intrusion detection accuracy across the bank's estate.
- Developed the RIO incident response methodology, adopted by the security team.
- Led fraud incident investigations — reduced financial exposure and improved response SLAs.

Cybersecurity Engineer (Internship) - *Banque Cantonale Vaudoise (BCV)* Aug 2023 – Aug 2024
Lausanne, Switzerland

- Tuned SIEM detection use cases in Splunk; integrated MITRE ATT&CK into detection, response, and mitigation workflows.
- Proposed enhanced incident response methodology adopted by the team.
- Conducted fraud investigations across banking customer incidents.

Cybersecurity Analyst – *Information Network Security Agency (INSA)* **Jan 2018 – Sep 2020**
Addis Ababa, Ethiopia — national security agency

- Applied applied-ML techniques to automate cryptanalysis tasks - early applied-ML work in a national security context.
- Built a web-based internal security training platform with cloud storage integration, used by agency staff.
- Developed and delivered national cybersecurity awareness training programs.

SELECTED PROJECTS & SPEAKING

- Keynote - Swiss Cyber AI Conference 2026, Lugano (April 2026): "Hacking LLM Applications."
- QAISP Certification Methodology - three-tier competency framework (Associate / Practitioner / Expert) with a 150-question exam bank covering prompt injection, model inversion, and supply-chain attacks; QR-verifiable certificates.
- Judge-Model Evaluation Pipeline - cascaded multi-model scoring system evaluating adversarial prompt defenses across three weighted dimensions (blocks attack, preserves function, minimality).

EDUCATION & CERTIFICATIONS

BSc, Software Engineering - Microlink IT College, 2013 – 2017
Cybersecurity Certification - Ariel University, 2018
Powercoders ICT Bootcamp - Bern, Switzerland - Alumnus 2023, ongoing partner & instructor
